

Laboratory Report

Laboratory #:	37016	Call Name:	Henry Higgins
Order #:	178663	Registered Name:	Bohemium of Zaporozhye Darius Heir Star
Ordered By:	Ashley Flowers-Fade	Breed:	Golden Retriever
Ordered:	March 1, 2023	Sex:	Male
Received:	May 26, 2023	DOB:	Sept. 2014
Reported:	June 5, 2023	Registration #:	UKU - 0297447/ AKC - SS05975603
		Microchip #:	900085000164597
		Tattoo:	61A3946

Results:

Disease	Gene	Genotype	Interpretation
Neuronal Ceroid Lipofuscinosis 5 (Golden Retriever Type)	CLN5	WT/WT	Normal (Clear)

WT, wild type (normal); M, mutant; Y, Y chromosome (male)

Interpretation:

Molecular genetic analysis was performed for a specific mutation reported to be associated with Neuronal Ceroid Lipofuscinosis 5 (Golden Retriever Type) in dogs. We identified two normal copies of the DNA sequences in the CLN5 gene tested. Thus, this dog is not at an increased risk for Neuronal Ceroid Lipofuscinosis 5 (Golden Retriever Type).

Recommendations:

No mutations were identified. Thus, this dog is not at an increased risk for the disease caused by or associated with the mutation tested. Because this dog is "clear" of this mutation, this dog will only pass the normal gene on to its offspring. Normal results do not exclude inherited mutations not tested in this gene or other genes that may cause medical problems or may be passed on to offspring. Paw Print Genetics® has genetic counseling available to you at no additional charge to answer any questions about these test results, their implications and potential outcomes in breeding this dog.

Helen F Smith, PhD
 Associate Laboratory Director

Christina J Ramirez, PhD, DVM, DACVP
 Medical Director

Paw Print Genetics® performed the tests listed on this dog. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. The results included in this report relate only to the items tested using the sample provided. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the test(s)' accuracy and precision with >99.9% sensitivity and specificity. The presence of mosaicism may not be detected by this test. Non-paternity may lead to unexpected results. This is not a breed identification test. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think any results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results.
